In our homeopathic practice we regularly come across a patients having some idiopathic or autoimmune diseases as these diseases has no treatment in allopathy.

In such a patients before starting to a treatment we take their complete history, family history, previous diseases and treatments taken. from this history we used to regularly observe that these patients are having some disease which is also running through their families and these are get suppressed by some anti inflammatory drugs, steroids, or for skin disease by strong external application ointments initially. for example some patients come to us with some chronic diseases either some idiopathic or autoimmune disease is having history of eczema which is also running through his family got suppressed by antihistamine, steroid ointments. Then these patient after some days present with severe life threatening diseases of vital organ in body to these they usually named as idiopathic or autoimmune diseases. these are Rheumatoid arthritis, idiopathic thrombocytopenic purpura, insulin resistance diabetes etc. .

In these patients we prescribe a drug which is very similar to the behavioral, genetic, constitutional make up of patient. This leads to the reappearance of old ailments of previous diseases like itching, burning, eruptions on skin and as these eruptions flares up on the skin patients suffering get more and better.

Similar to the suppression skin diseases allergies there is increased use of hormones in treatment of some specific diseases or even excessive and unnecessary use of drugs like HCG in natural phenomenon like pregnancy will definitely going to affect hormone mediated immunity too.

So, there is serious need of making aware of side effects of suppressive treatments for hereditary diseases as these will coast to some major health issues in future

It is my mission to make people aware of the truth that homeopathy is the only treatment to cure asthma in children and adults, and all other hereditary diseases.
